

zboes

A fully integrated multifunctional software platform.

The **talemate**-software platform is a system to control, guide and link robotics, IoT and metaverse in both the real and the virtual world.

The complete platform is operated by a 'no-code' system:
a unique environment with building blocks that can be used without technical skills.

Talemate gives live to:

METaverse

Create, guide and control your own smart virtual world populated by robots, cartoons and avatars of actual people.

INCLUDING:

- Possibility to change the Metaverse-experience over and over again
- Ability to scan yourself
- Compatible with VR-goggles

IOT - SMART DEVICES

Connect +10 mio smart devices from over 2.000 brands to operate independent in collaboration with each other.

INCLUDING:

- Fully MQTT compatible (Multiple brokers)
- Connecting complete home-environments
- Fully open API
- Up to 20 times faster project

ROBOTICS

Guide and control any robot to act, react and complete complex tasks as you desire.

INCLUDING:

- Auto Navigation of your robot with floorplan and points of interest
- Fully open API
- Launch your app on our KIOSK

Combine and guide smart devices and IOT in real life and in the metaverse at the same time.

Test any action in a full no-code digital twin.

Combine complex tasks for robots to perform in real life in collaboration with actions from smart devices.

Fully integrated projects

Docker container

Multilingual: 52 available languages

No technical skills required to operate

Whitelabel option
